Wiren Board Brand Identity Guidelines

Logo

The logo is the primary element of the company's brand identity.

Logo usage applications

- Horizontal without descriptor
 - the preferred option for most advertising and corporate communications;
 - co-branding blocks;
 - merchandise.
- Horizontal with descriptor

Used for initial contact situations — when the audience has had no prior interaction with the brand.

 - business cards, equipment catalogs;
 - exhibitions and industry events;
 - advertising campaigns targeting cold traffic;
 - presentations for new partners;
 - public materials outside the core professional community.
- Short version in a circle
 - may be used as a favicon and website icon, in email newsletters, stickers, and on photos.

Capitalize the "W" and the "B" in Wiren Board in all copy text and put a space between words. Wiren Board should only be presented in all lowercase when displayed in our official logos.

Equipment

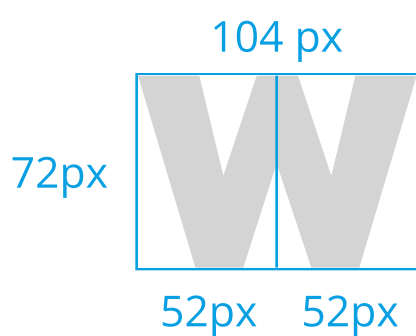

Logo

Logo clear space

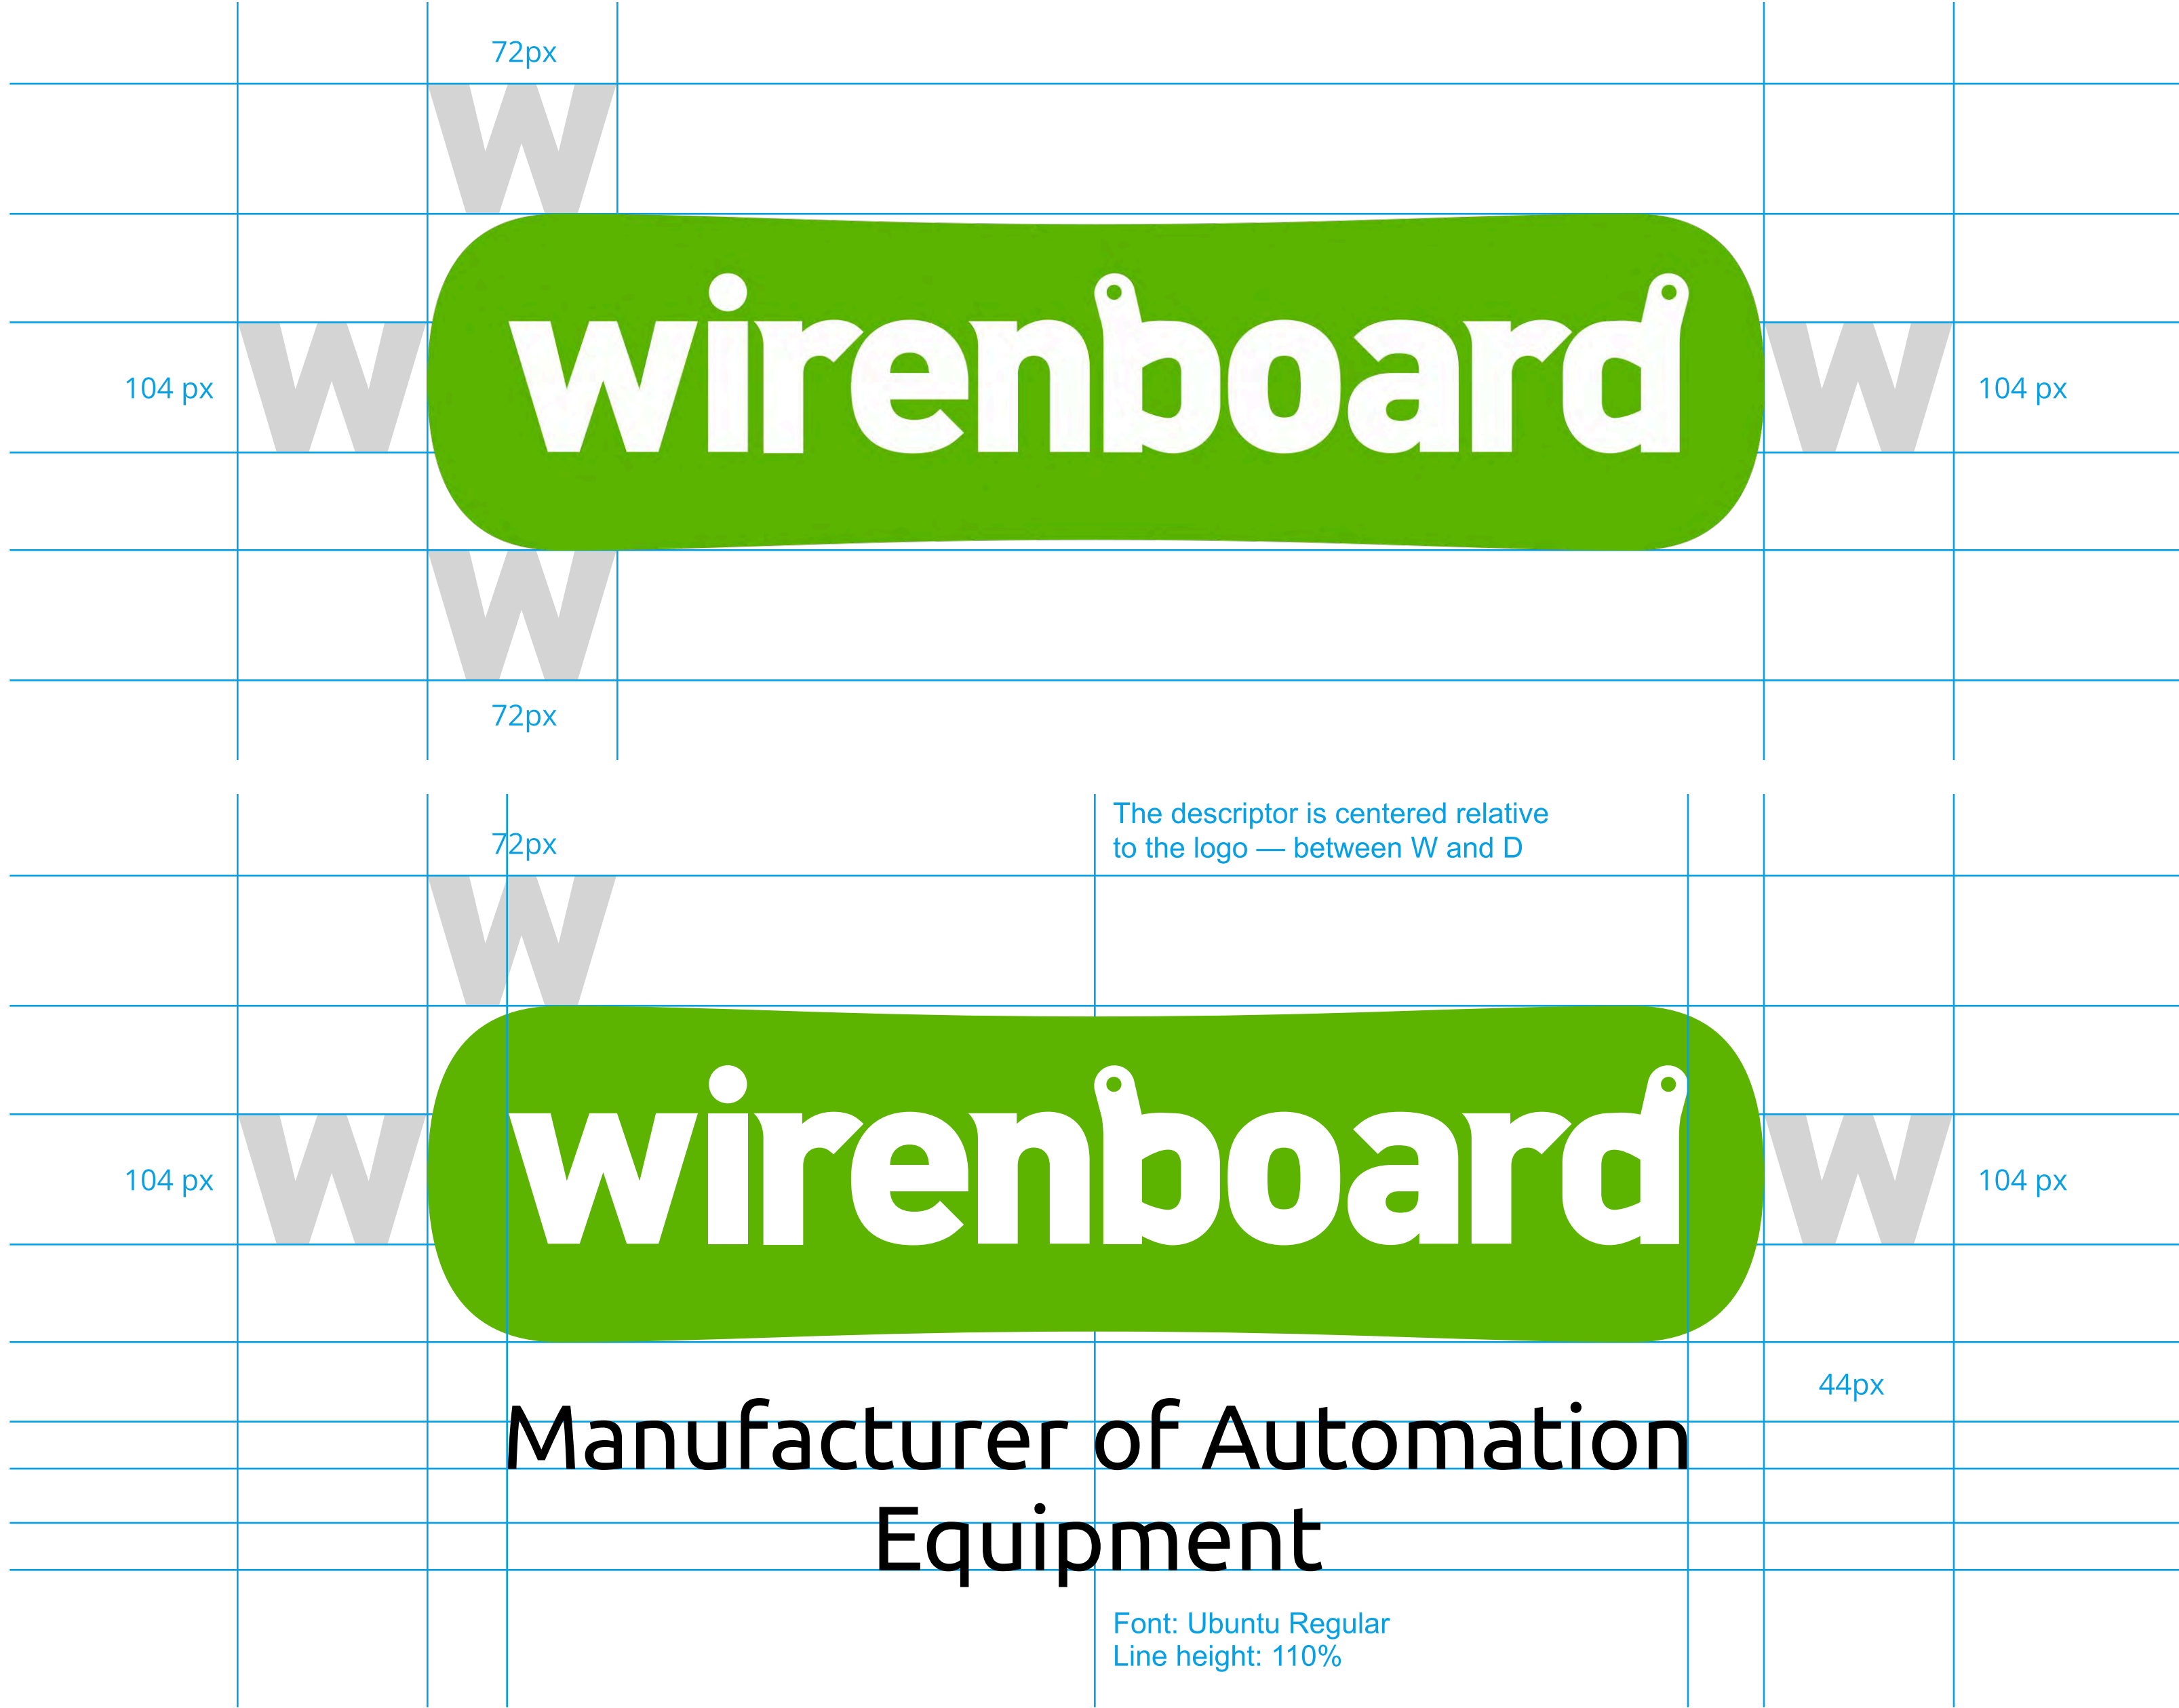

Ensures the legibility and integrity of the logo across various media.

The space surrounding the logo should be larger than the minimum clear space. No images, text, inscriptions, or graphic elements may appear within this area.

Clear-space grid for the logo with descriptor.

The logo's clear space is the minimum required area around the logo that must remain free of other objects or text.

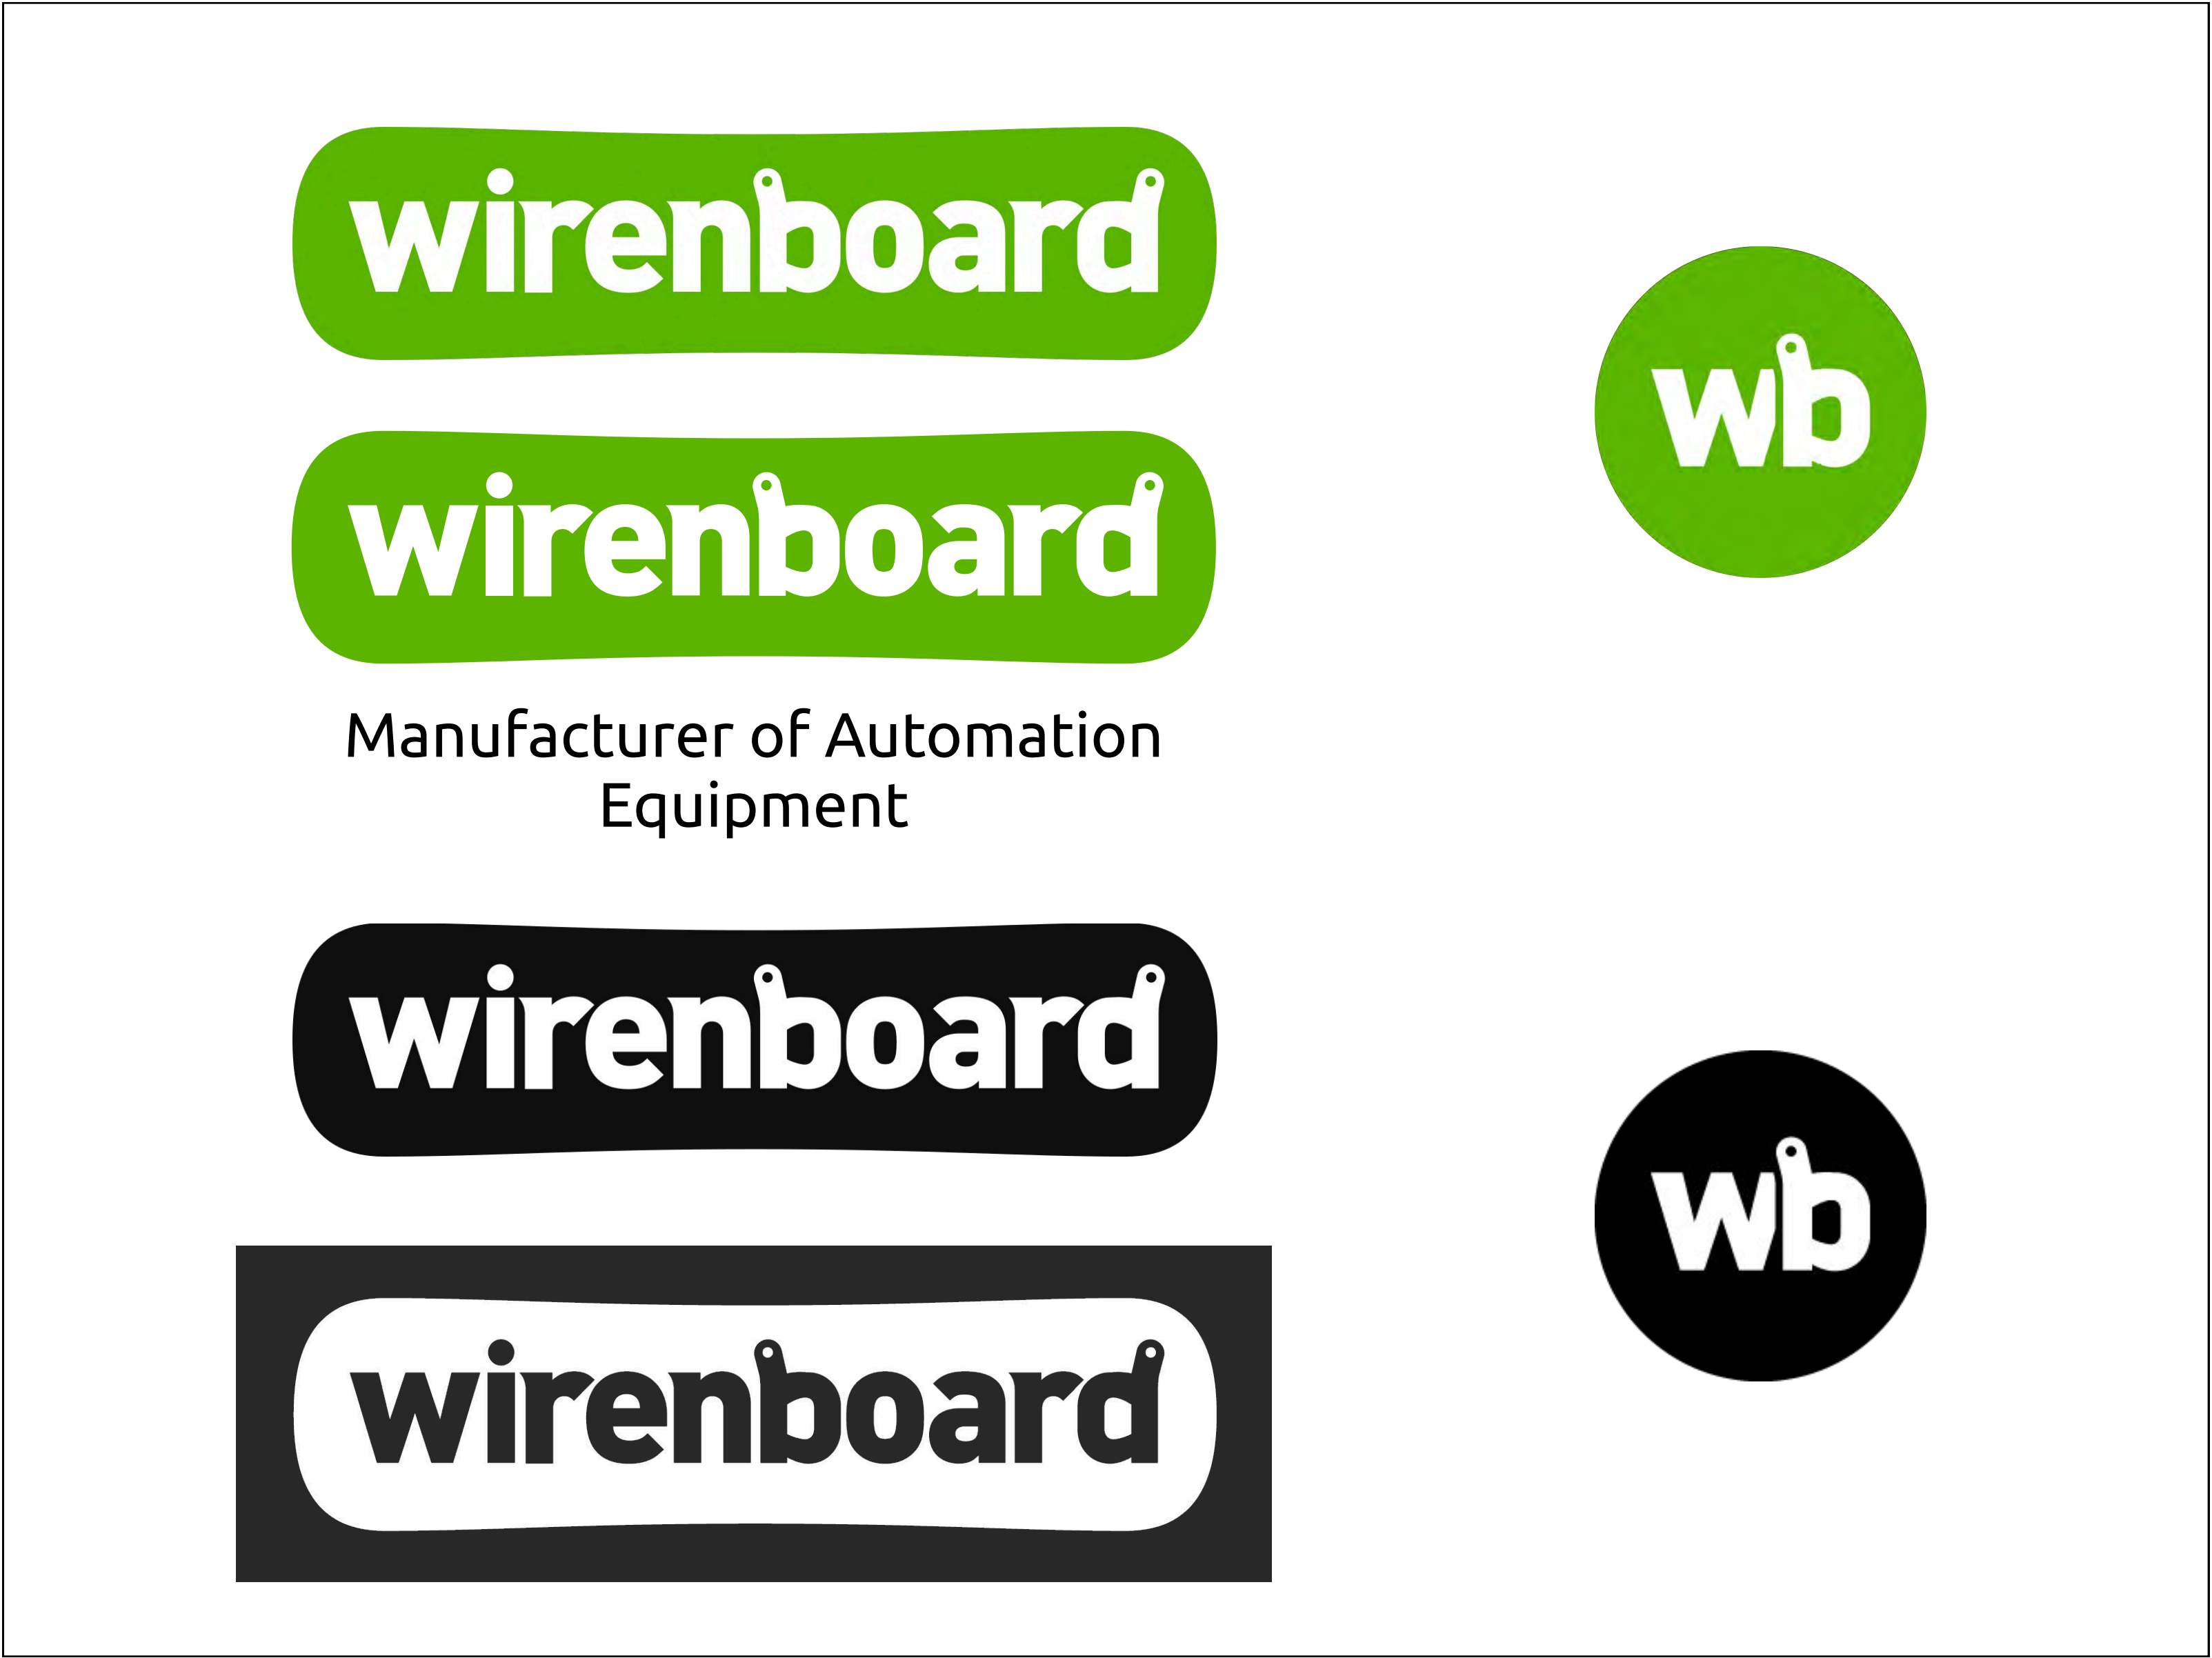

Logo

Logo and favicon variations.

Logo and favicon variations
in monochrome and inverse versions.

Examples of placement on background
substrates are provided later in the
guidelines.

Logo

Color options — the logo may appear in the brand green or in the inverse version (black).

The green logo is used on white, gray, black (brand background colors), and photographic backgrounds.

The short logo version may be used on photographic backgrounds when the primary logo does not fit or interferes with the visual layout.

The monochrome/inverse logo may be used on white, gray, green, and photographic backgrounds.

In web communications and print materials, the logo is primarily placed in the top-left corner. If it does not fit compositionally, it may be placed in other corners or centered.

Primary logo version on background substrates

Monochrome/inverse logo version on background substrates

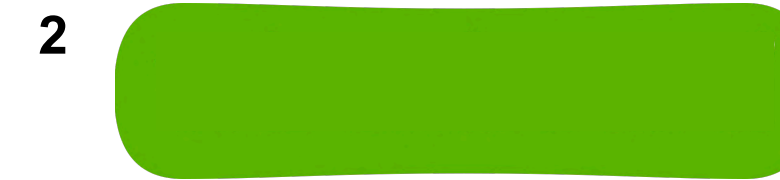

The inverse logo is used to ensure sufficient visibility and legibility in certain cases — for example, if the website has a black-and-white style or if merchandise can only be printed in black and white.

Logo

The following examples illustrate how the Wiren Board logo **must not be used**:

1. The logo may not be used in any form without the main “board” element.
2. The “board” element may not be used without the wordmark.
3. The logo’s proportions must not be distorted.
4. The logo must not be rotated.
5. The logo must not be colored in any colors other than brand green or black (inverse).
6. The logo must not be textured.
7. The logo must not use gradient fills.
8. The logo must not be used as a stencil.
9. No shadows or effects may be added to the logo.
10. The simplified logo must not be used without the circle.
11. The logo must not be used on backgrounds other than those specified in these guidelines.

1 

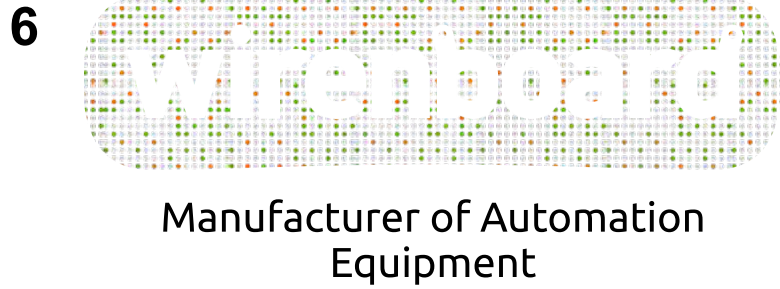

Logo

The previous slide uses the Wiren Board logo to demonstrate **prohibited** logo usage.

The same rules apply to the logo version with a descriptor.

Additionally, **it is not used** in the following cases:

- in communications with existing clients;
- in technical documentation;
- in specialized professional environments where the brand is already well-known;
- in internal company materials.

Logo

Co-branding examples

1. The preferred co-branding option is a horizontal block with the partner's logo placed to the left of the Wiren Board logo.
2. The vertical co-branding block is used when the format does not allow for the horizontal layout. In this case, the partner's logo is placed below the Wiren Board logo.
3. The space between the Wiren Board logo and the partner's logo must be:
horizontally — half the logo's clear-space length, 52 px; vertically — 72 px.
4. In co-branding, the Wiren Board logo is used without the descriptor.

Photo Style

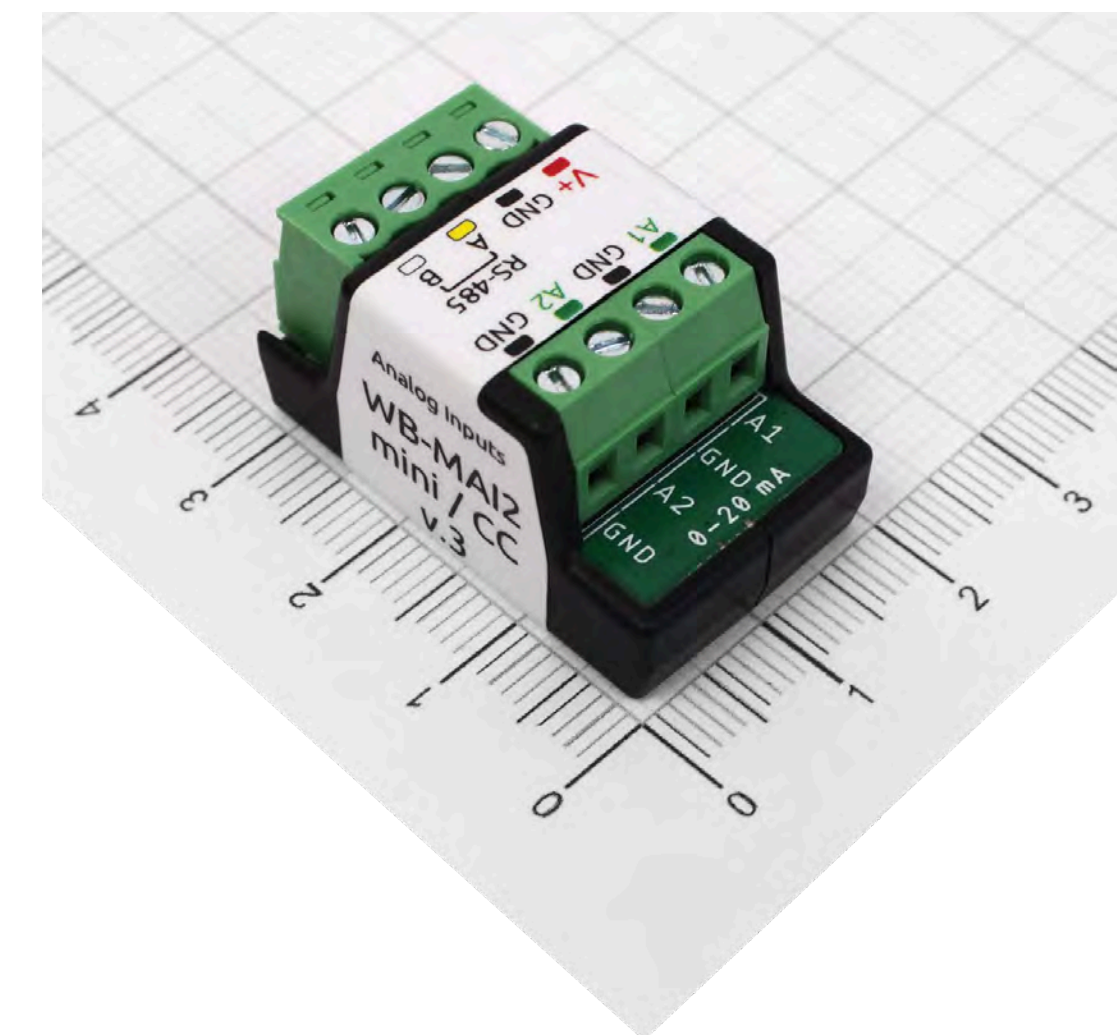

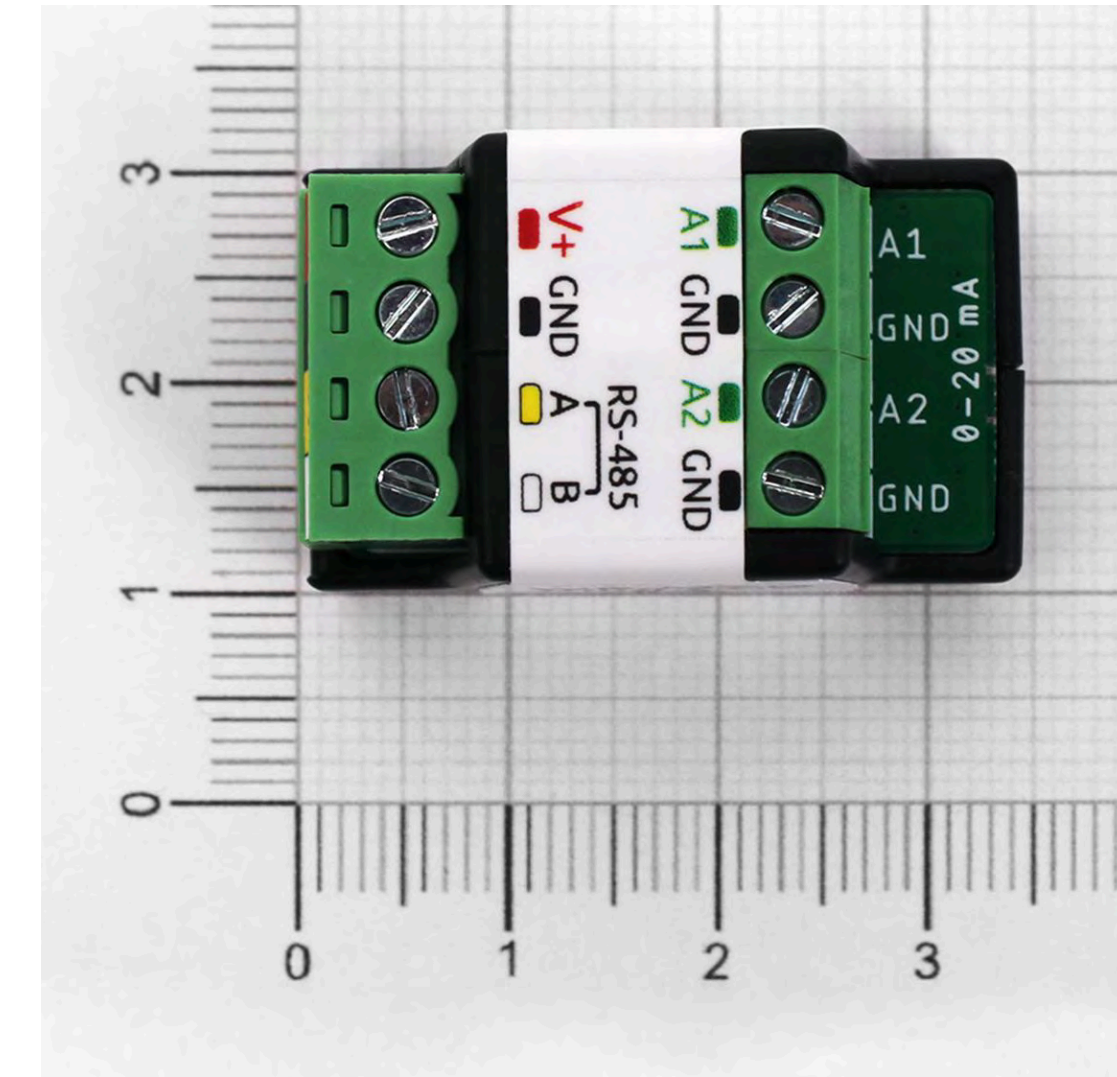

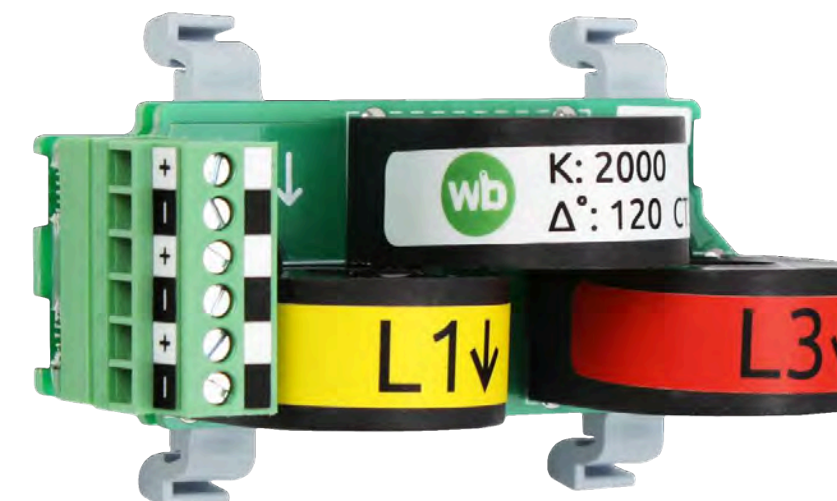

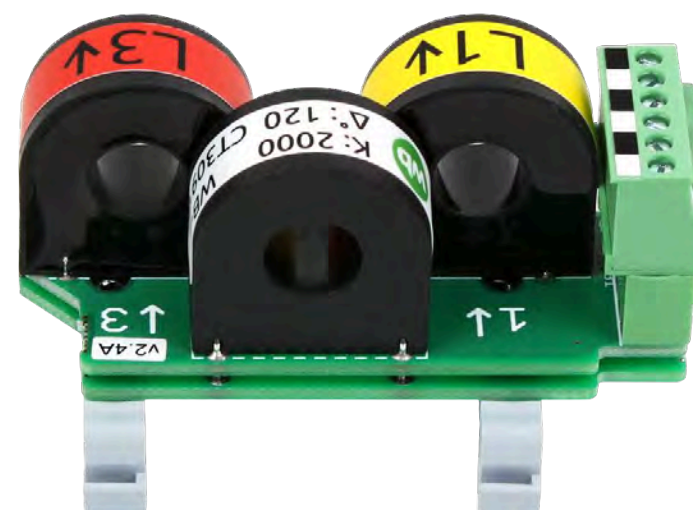

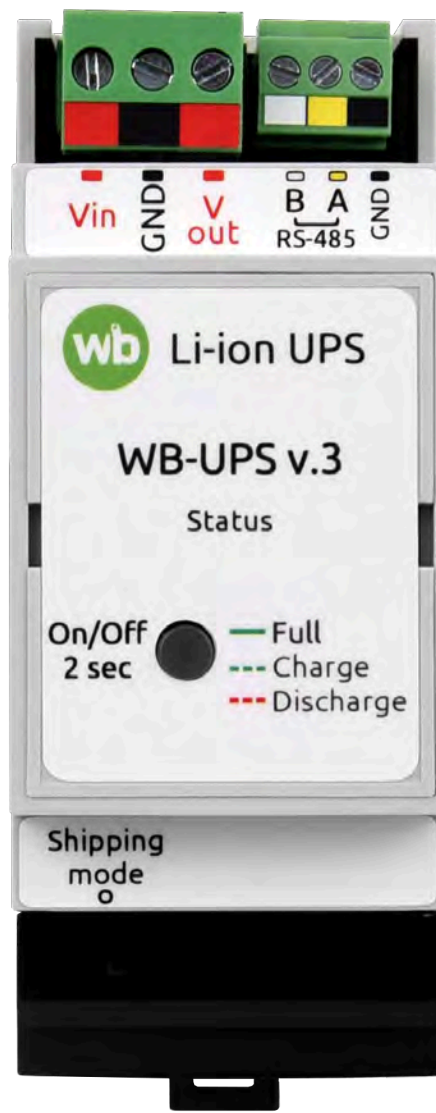

Photographs of our devices must be sharp, high-contrast, and feature balanced lighting. Images should convey depth and volume, clearly illustrating the object's dimensions to provide a realistic feel.

Every device should be captured from at least two angles:

- frontal view;
- side view.

Additional angles may be used depending on the device to highlight its specific design details and form factor.

Small devices should be photographed on graph paper to provide a clear sense of scale and size.

Advertising Materials

Layout Composition and Grid

The grid is necessary for the correct placement of the logo, text blocks, and images on layouts.

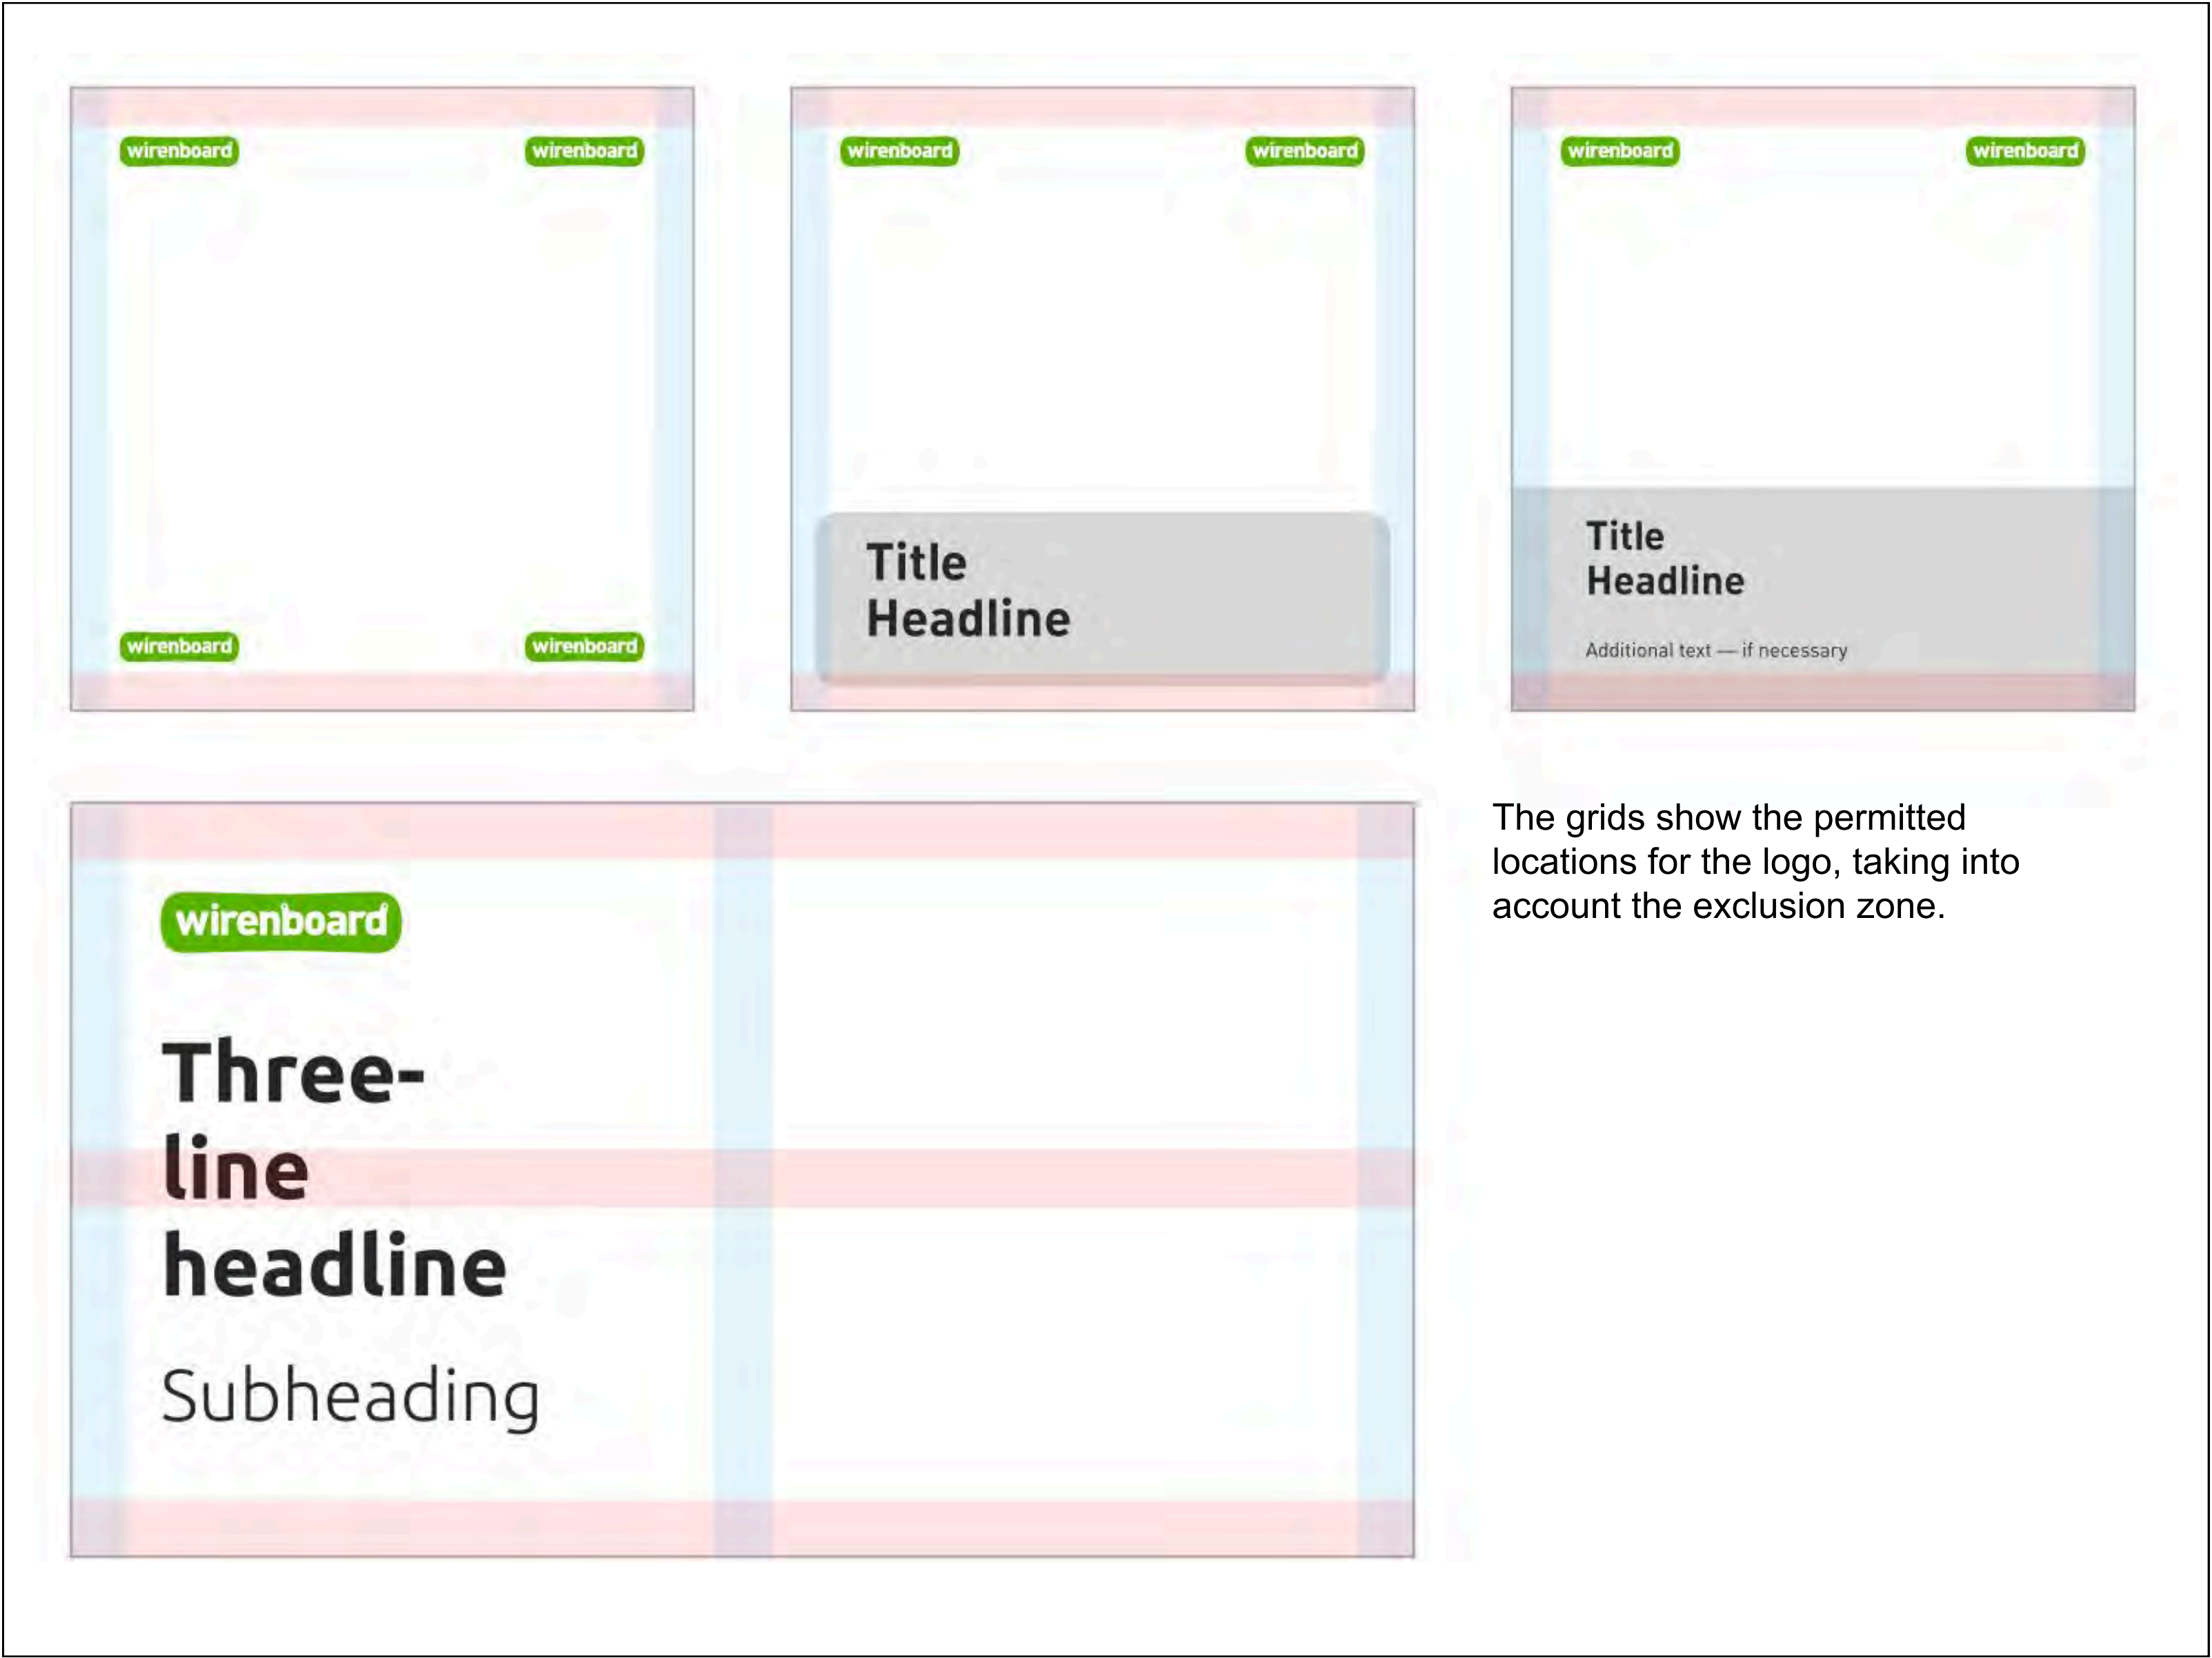

If a featured image already contains a logo, additional logo placement on the layout is not required.

Layout Template Sizes

For social networks — 1080 x 1080 px.
Includes logo, image, and an optional text block with a background.

For **article** covers — 780 x 438 px.
Includes logo and image.

For video covers — 1920 x 1080 px.
Includes logo, image, and an optional text block with a background.

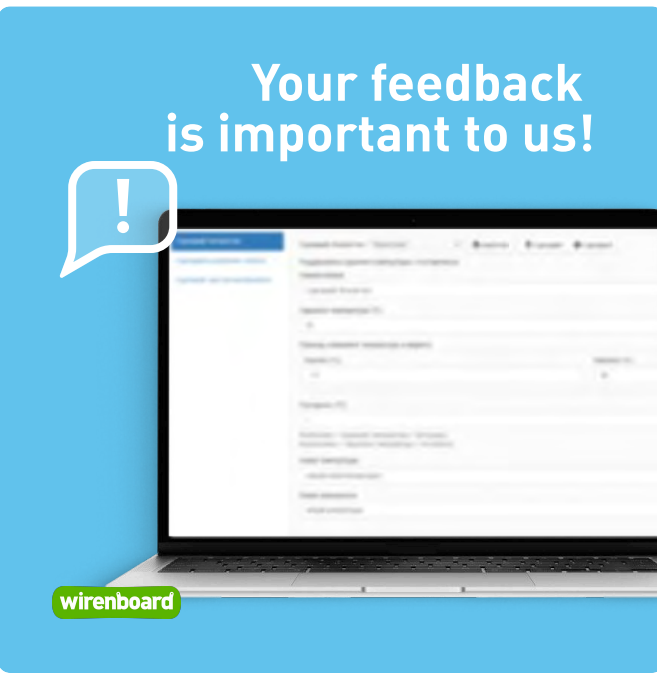

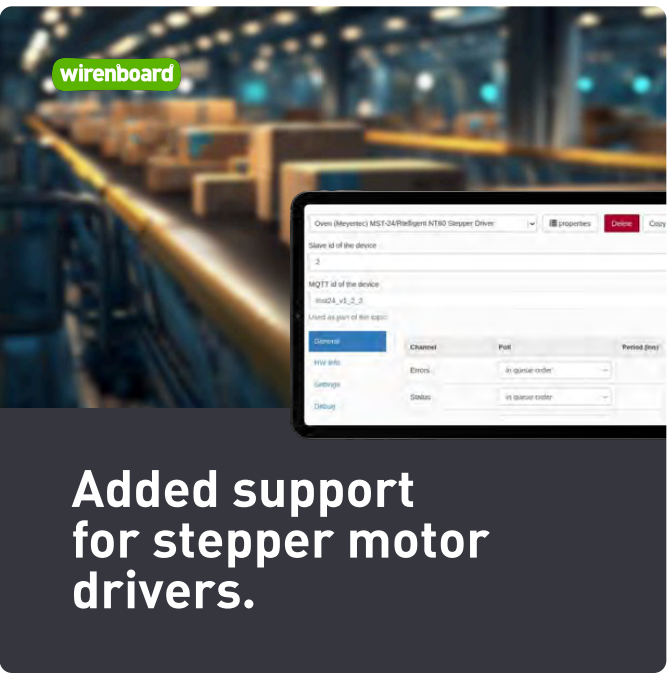

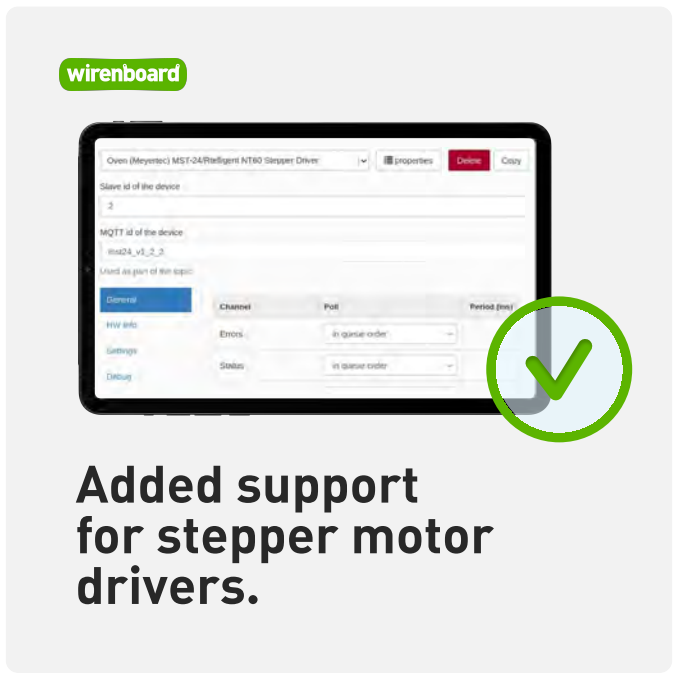

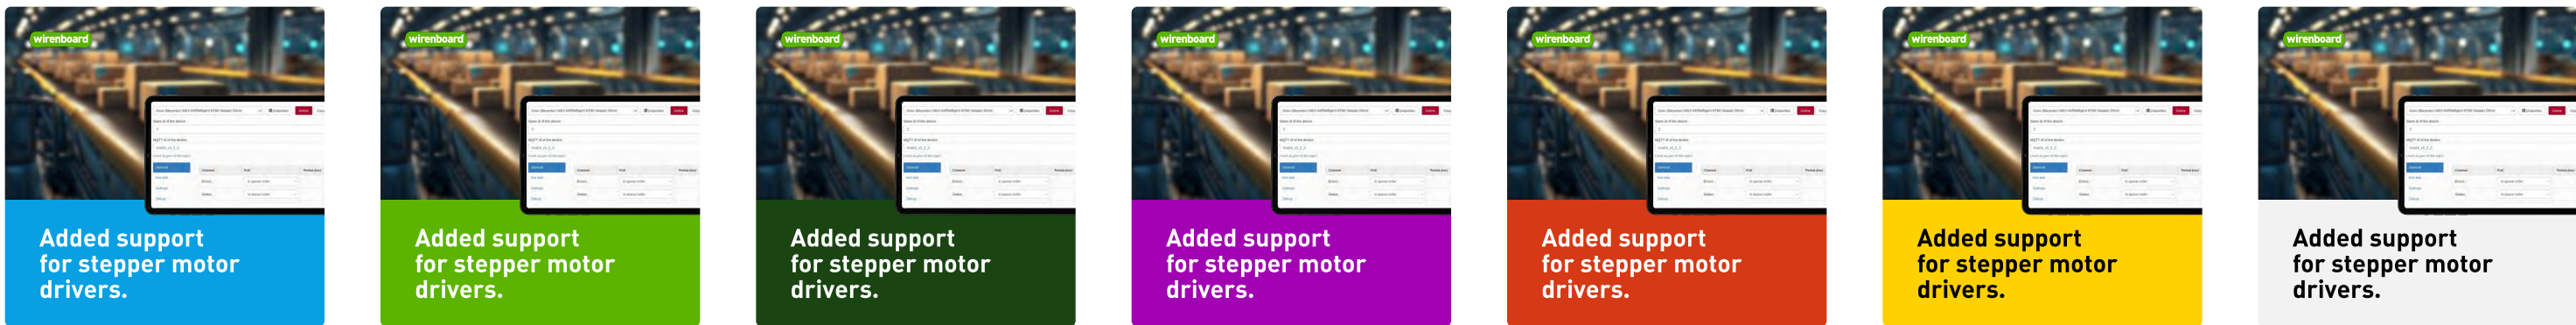

The grids show the permitted locations for the logo, taking into account the exclusion zone.

Advertising Materials

Examples of palette usage in social media layouts.

Examples of social media layouts.

Example of covers for videos and articles.

Brand Style Elements

Circles of the corporate green and light blue colors are placed in the background of advertising materials, supported by the shapes of icons and infographics.

To create dynamics and attract attention to the layout, circles are drawn in different sizes while respecting the palette hierarchy.

Used in:

- advertising materials;
- printing.

Prohibited:

- using colors not specified in this guide;
- placing elements on a photo background with a complex texture or varying contrast.
